Introduction

- ProLight PBEE colorful series is a color changeable LED with maximum 4 color chips in one package. Compared to discrete LEDs, PBEE series reduce the distance between LED die, creating a small optical source for excellent optical control and efficient color mixing. ProLight PBEE series is much suitable for the application of color-changing lighting, especially for entertainment lighting.

- We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.
- Do not use solder pastes with post reflow flux residue > 47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.
- All temperatures refer to topside of the package, measured on the package body surface.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than three times.
- When soldering, do not put stress on the LEDs during heating.
- After soldering, do not warp the circuit board.
